

# Capstone Project - The Battle of Neighborhoods

## **Introduction and problem**

This project is a part of IBM data science, which we are going to explore the data of Helsinki, Finland, where I am staying currently. Helsinki is the capital and most populous city in Finland and has not only its own unique vibe of a charming Scandinavian city but also a contemporary feel.

In 2017, according to, the number of overnight stays in Helsinki was about 5.3 million for both domestics and international visitors. Helsinki's main attractions are urban culture with the diversity in events and foods. In this final project, we are going to focus on exploring Helsinki in different categories in all areas to observe what people have been enjoyed when they come to Helsinki using Foursquare.
